ABOUT THE PROJECT
Disease Control Priorities Network at University of Washington’s Department of Global Health, funded by the Bill & Melinda Gates Foundation, promotes and supports the use of economic evaluation for priority setting at both global and national levels through policy advocacy, country engagement, and the production of Disease Control Priorities, Third Edition (DCP3).

DISEASE CONTROL PRIORITIES, THIRD EDITION
Building on its predecessors DCP1 (1993) and DCP2 (2006), the third edition, published by The World Bank Group, provides the most up-to-date evidence on intervention efficacy and program effectiveness for the leading causes of global disease burden. It goes beyond previous efforts by providing systematic economic evaluation of policy choices affecting the access, uptake and quality of interventions and delivery platforms for low-and middle-income countries.

Complete volumes of DCP3 will be published electronically and in hard copy in 2015 and 2016. They will be available at dcp-3.org and through the World Bank Open Knowledge Repository at openknowledge.worldbank.org.

DCP3 SERIES EDITORS
Dean Jamison
University of Washington Department of Global Health
Rachel Nugent
University of Washington Department of Global Health
Hellen Gelband
Center for Disease Dynamics, Economics & Policy
Susan Horton
University of Waterloo, School of Public Health and Health Systems
Prabhat Jha

DCP3 – DISEASE CONTROL PRIORITIES

DCP3 presents its findings in nine individual volumes addressed to specific audiences. The first eight volumes are structured around packages of conceptually related interventions, while the ninth provides an overview with main findings and conclusions about achieving health priorities.

Similar to the first and second editions, DCP3 includes an up-to-date comprehensive review of the efficacy, effectiveness, and cost-effectiveness of priority health interventions with the goal of influencing program design and resource allocation at global and country levels. In addition, DCP3 volumes present systematic and comparable economic evaluation of selected interventions, delivery platforms, and policies, based on new analytical methods being developed specifically for DCPN. The comprehensive economic evaluation incorporates evidence on intervention quality and uptake, along with non-health outcomes such as equity and financial protection.

**Volume 1 – Essential Surgery**
March 2015
The *Essential Surgery* volume presents the burden of surgical conditions along with health and economic analyses of procedures, platforms, and packages to improve care in settings with severe budget limitations. Underlining surgery’s contribution to global public health, the volume explores the challenges and successes found in implementing surgical care strategies within low- and middle-income countries.

**Volume 2 – Reproductive, Maternal, Newborn, and Child Health**
August 2015
The RMNCH volume covers conditions along the reproductive health continuum, exploring interventions that support healthy lives from antenatal care until age five. Reproductive health issues are highlighted along with comprehensive reviews of recent cost-effectiveness evidence.

**Volume 3 – Cancer**
May 2015
The *Cancer* volume delves into the frequently overlooked burden of cancer in low-resource settings. Considering that cancer treatment if often prohibitively expensive, this volume explores feasible options for prevention, screening and treatment of various types of cancer, as well as cancer-related insurance and financing policies.

**Volume 4 – Mental, Neurological, and Substance Use Disorders**
September 2015
*Mental, Neurological, and Substance Use Disorders* take many forms that often require chronic treatment. This volume looks at the global and regional estimates for the burden of these disorders, along with the effectiveness and cost-effectiveness of interventions and packages of care available in low- and middle-income countries.

**Volume 5 – Cardiovascular, Respiratory, Renal, and Endocrine Disorders**
October 2015
Non-communicable diseases are the largest contributor to premature morbidity and mortality globally. This volume reviews the health and economic burden of such diseases, and effective and feasible options for prevention, diagnosis, and treatment.

**Volume 6 – HIV/AIDS, STIs, Tuberculosis, and Malaria**
December 2015
The *HIV/AIDS, STIs, TB and Malaria* volume explores the cost-effectiveness of prevention, treatment, and management of major infectious diseases endemic in low-resource settings. Treatment as disease prevention, specialized health delivery platforms for certain populations, balancing access to TB prevention and treatment, and malaria elimination are among the topics highlighted.

**Volume 7 – Injury Prevention and Environmental Health**
February 2016
The *Injury Prevention and Environmental Health* volume addresses topics such as interpersonal violence, water and sanitation, global warming, road traffic injury, unintentional injury, priorities for environmental health and injury control, and policy implications for addressing these conditions.

**Volume 8 – Child and Adolescent Development**
May 2016
The *Child and Adolescent Development* volume discusses childhood chronic illnesses, chronic malnutrition, and cognitive development. It seeks to evolve beyond the acute and severe conditions traditionally addressed under the rubric of child health, and give emphasis to the longer run consequences of chronic conditions.

**Volume 9 – Disease Control Priorities: Improving Health and Reducing Poverty**
July 2016
The final volume in the series provides an overview of DCP3 findings including a summary of messages and substantive lessons to be taken from DCP3. This volume discusses health system policies (including financing global health, quality of care, and strengthening regulatory systems in low- and middle-income countries), as well as the methods and resources used throughout all DCP3 volumes.
